(888) U.S.-OTDRS | www.teratec.us  
Terahertz Technologies Inc. (TTI)
NOTE FROM THE PRESIDENT

The founders and team members of TTI have a wealth of experience in the Photonics and Fiber Optics test and measurement industry dating back to the early 1970s when fiber was still in its infancy. After many years of ingenuity and dedication, we founded TTI in 1989 with the purpose of continuing to delight our customers, assist them in finding the best solutions, and keeping abreast of the technologies they deploy. Our roots may be in the Mohawk Valley Fiber Optic Industry of central New York, but our reach is global, and we pride ourselves in being a world class producer.

Our technology and product development experiences include design and marketing the world’s first commercial processor driven Optical Time Domain Reflectometer. Other historic developments include Radiometric Energy and Power Meters, Optical Choppers, Space Probe Mission Sensors, and the industry standard Electrically Calibrated Pyroelectric Radiometer.

Through our experiences the principle engineers at TTI are proud to have amassed over 100 years of combined experience in photonics and fiber optic instrumentation. We also are extremely proud to be one of the few USA developers and manufacturers of OTDRs and high tech photonics equipment, and look forward to maintaining this commitment.

Mike Mazzatti

FTE-7100-CWDM-10 OTDR

Advanced features in a small package

The FTE-7100 CWDM MICROTD is the smallest OTDR of its type on the market today. This micro package can support up to 10 CWDM wavelengths. This full-featured OTDR with color touchscreen includes all the features expected in today’s hand held OTDR and more: bright color touch screen, project management, file storage, Fib-R-Map schematic event analysis, pass/fail threshold settings and onboard context-sensitive Express Help system to keep the learning curve as short as possible.

Easy-to-use

The MICROTD is user-friendly and supports portrait or landscape trace viewing. It operates in simple fault finder mode or expert modes.

Powerful and customizable

When equipped with the optional video scope, it is a powerful video inspection system with IEC61300-3-35 auto pass/fail capabilities. Other optional features include a broadband power meter and visual fault locator. The CWDM MICROTD is available in 4, 8 or ten wavelengths. Select from our stand wavelength offerings or design the OTDR as needed by ordering custom wavelength configurations.

Real-Time functionality

The OTDR is operated/charged with a standard 5V USB charging system, or use the USB cable to connect the OTDR to a laptop for full real-time operation on Windows™. It can also be operated via Bluetooth with a compatible Android phone or tablet.

Features

- Up to 10 CWDM Wavelengths
- 1 Meter Dead Zone
- Touch Screen
- Video Scope Option With Auto Pass/Fail
- VFL & Power Meter Options
- Bluetooth Operation Android Devices
- Fib-R-Map Event Analyzer
- Macro Bend and Bidirectional Analysis
- Full Auto and Expert Modes
- Instant On, Immediate Scan
- Live Fiber Detection

Terahertz Technologies Inc.
The FTE-8200 Optical Spectrum Analyzer is one of the most rugged and affordable full featured Mini OSAs on the market. This C-band Hand-Held OSA is available in up to 98 channels with 50 and 100 GHz channel spacing. The FTE-8200 is simple and fast to operate with its touch screen operation and twice a second scan. It offers high end features such as power tilt monitoring for DWDM channel equalization. With a full set of selectable scale limits and thresholds, the FTE-8200 makes zeroing in on channel measurements easy. For flexibility the channel numbers are selected in wavelength or frequency. The information is displayed in graph, 6GHz line graph and table mode on the 4” bright auto rotating color touch screen. The FTE-8200 allows users to set pass/fail thresholds and can store up to 1000 tests that can be downloaded via the USB PC port. Documentation is fast and easy with the included Cert-Soft certification software. The onboard Help system assists new users in parameter setup and file manipulation.

The FTE-8200 offers an IEC61300-3-35 auto Pass/Fail video inspection feature for use with the optional VIS-300 Video Probe.

**Features**
- Fast Real Time with <1/2 second Update
- Bar Graph, Table Displays & 6GHz Line Graph
- Auto Test Zooms in on Active Channels
- Rugged Case w/Impact Resistant Boot
- Optional Auto Pass/Fail Video Inspection System
- Solid State Optics-No Moving Parts
- Up To 98 Channels
- 50 or 100 GHz
- Pass/Fail Thresholds
- User Setup Screen
- 4” Touch Color Display
- Impact Resistant Boot
- Stores up to 1000 test
- USB/PC Port

---

*TTI reserves the right to change specifications without notice.*
The FTE8200-CWDM Channel Analyzer is rugged, affordable and easy to use. The standard CWDM hand held analyzer is available in 18 or 8 channels with 20 nm spacing. The 18 channel analyzer tests 1271-1611nm and the 8 channel tests 1471-1611nm. The FTE-8200-CWDM analyzer is simple and fast to operate with its touch screen interface and twice a second scan. This low cost, full featured CWDM Channel Analyzer is designed to withstand your field operations with power tilt feature with a full set of selectable scale limits. Information is displayed in graph mode which makes zeroing in on channel measurements easy and the user selects Pass/Fail thresholds that may be store in a project base file system. Up to 4000 tests that can be saved and downloaded via the USB PC port and documented with the included certification software. Use the optional Video Inspection Scope and Probe with auto grading Fib-R-View system to ensure connector cleanliness prior to testing. The onboard Help system guides new users through operation and assists in parameter settings.

The FTE-8200-CWDM is housed in a water resistant enclosure with a robust protective boot.

**Features**
- Pass/Fail Thresholds
- Available in 8 or 18 Channels
- Fast Real Time with <1/2 second Update
- Video inspection Scope and Probe Option
- Available with APC or UPC Connections
- Bar Graph
- Rugged Case w/Impact Resistant Boot
- Solid State Optics-No Moving Parts
- Easy Operation with Help Mode
- 4” Color Display
- 6hr Battery Life
- Stores 4000 test
- USB/PC Port

Fiber Optic Test Equipment

Fiber Optic Test Equipment

FTE-7100 MICROTDR
Available in SM/MM/QUAD/PON

Available in a Variety of Models
The FTE-7100 is available in a wide variety of models. It is available in Dual SM or MM and SM/MM Quad wave as well as CWDM and PON versions.

Micro Size with Large Capability
This small touch screen OTDR may give up some size, but give nothing away in functionality. The auto rotating screen offers a large clear trace view.

Project Management
Use the parameter screen to enter all parameter and threshold settings for a project, name the project and store files to the active project folder. Use stored projects to recall testing parameters for consistency in test setup.

Loss Test Set and VFL
The FTE7100 can support an optional Power meter and/or VFL. When used with other TTI equipment the power meter’s auto wavelength recognition will speed testing and help eliminate user error.

Fib-R-View - Integrated Video Inspection
Ensure accurate test and protect equipment from damage by inspecting the fiber. The FTE7100 displays trace analysis in schematic and tabular views. The trace analysis screen gives users the ability to quickly review the fiber and determine if it meets measurement criteria with its Pass/Fail capabilities.

Auto Test
The Auto Test feature does a quick test of the fiber conditions, sets the range and pulse width, then produces a trace of the fiber under test at the selected wavelength. This is ideal to use if unfamiliar with OTDR testing or if the approximate length of the fiber is not known.

File Storage and File Transfer
The FTE-7100 supports onboard storage for ~40,000 traces. Trace files are easily transferred for use with the CertSoft2 reporting software suite via USB ports.

CertSoft2 Software Suite
Project reporting and documentation is fast and easy with the supplied CertSoft2 reporting software. Reports can include trace graph, schematic and tabular analysis, loss test table and connector image.

Features
- Models up to 39dB dynamic range
- 1 Meter Dead Zone
- Touch Screen
- Video Scope With Auto Pass/Fail Option
- VFL & Power Meter Options
- Bluetooth Android Tablet Operation
- Fib-R-Map Event Analyzer
- Macro Bend and Bidirectional Analysis
- Full Auto, Construction and Expert Modes
- SM, MM, Triple, Quad & CWDM Units
- Instant On, Immediate Scan
- Live Fiber Detection
- Onboard Memory of ~40,000 traces
- CW / Fiber Identifier Light Source
- CertSoft Report Software
- Real-Time System ORL

Ordering Information
- FTE-7100-1315 1310/1550nm Dual Wavelength MICROTDR
- FTE-7100-8513 850/1300nm Dual Wavelength MICROTDR
- FTE-7100-CWDM 850/1310/1550nm QUAD Wave MICROTDR
- FTE-7100-PON 1310/1550nm with 1625nm Active PON MICROTDR
- FTE-7100-CWDM-CL 1551/1571/1591/1611nm Dual Wavelength MICROTDR
- FTE-7100-CWDM-S 1471/1491/1511/1531nm Dual Wavelength MICROTDR

Configurable Options
- FTE-7100-VP Video Scope with VIS-300 Video Probe Option
- FTE-7100-PMP Power Meter Option
- FTE-7100-VFL Visible Fault Locator Option

Fiber Optic Test Equipment

FTE-7000A-DWDM OTDR

98 Channel Tunable OTDR
Conduct optical time domain reflectometry test at wavelengths for DWDM channels 14-62.5 in the C Band of the ITU Grid.

Tunable Laser Source
Operates as a CW or pulsed Tunable laser source.

Touch Screen Operation
There are three methods of operation for the FTE-7000A. There is a hard-button method directly on the units keypad, the bright 4-inch display allows for touch screen operation, and if a larger display is desired, this OTDR may be operated via Bluetooth on any compatible Android device.

Fib-R-Map Trace Analysis
The FTE7000A displays trace analysis in schematic and table views. The trace analysis screen gives users the ability to quickly review the fiber and determine if it meets measurement criteria with its pass/fail capabilities.

Fib-R-View - Integrated Video Inspection
Ensure accurate test and protect equipment from damage by inspecting connectors with the integrated one-touch auto-center, and one-touch auto pass/fail fiber optic video inspection system.

Auto Test
The Auto Test feature does a quick test of the fiber conditions, sets the range and pulse width, then produces a trace of the fiber under test at the selected wavelength. This is ideal to use if unfamiliar with OTDR testing or if the approximate length of the fiber is not known.

File Storage and File Transfer
There is onboard storage for up to 1000 traces. Trace files are easily transferred for use with the CertSoft2 software suite via USB/PC ports.

CertSoft2 Software Suite
Project reporting and documentation is fast and easy with the supplied CertSoft2 reporting software. Reports can include trace graph, schematic and table analysis, loss test table, and connector image.

Project Management
Use the parameter screen to enter all parameter and threshold settings for a project, name the project and store files to the active project folder.

Ordering Information

FTE-7000A-DWDM
C Band DWDM Tunable OTDR/Laser Source 1527.4nm - 1565.4nm

VIS300
Video Probe for FTE7500 and FTE7000 Series
98 Channel DWDM Analyzer
The FTE-8100 Handheld OSA tests up to 98 channels. Select 50GHz or 100GHz channel spacing in the C band of the ITU Grid

Pass/Fail Thresholds
User selectable Pass/Fail thresholds are indicated on the main graphical display by a highlighted background with failed channels falling outside the highlighted area. In the table view, failed measurements are easily identified by being shown in red.

Auto Test button
With its one button Auto Test feature, full set of selectable scale limits and thresholds, the FTE-8100 makes zeroing in on channel measurements easy.

Power/Gain Tilt
The Hand Held FTE-8100 offers high end features such as power tilt for DWDM channel equalization and gain tilt to adjust EDFA gain flatness.

Fib-R-View - Integrated Video Inspection
Ensure accurate test and protect equipment from damage, by inspecting connectors with the integrated one touch auto-center, and one touch auto pass/fail fiber optic video inspection system.

Onboard Help System
Use the onboard help text for a quick guide to the functions and features available on the FTE8100.

Storable Test Configurations
File and recall testing configurations for later use.

Information Display
For flexibility the channel numbers are selected in wavelength or frequency and the information is displayed in graph or table mode

Onboard File Storage
There is file storage for up to 1000 tests that may be downloaded to a PC and viewed with supplied CertSoft reporting software.

- Available for CWDM Channels
- Integrated Video Inspection System
- 4" Color Touch Screen
- Selectable First Channel Setting
- 50 or 100 GHz DWDM Channel Spacing
- Pass/Fail Thresholds
- Fast <1/2 Second Update
- Bar Graph and Table Modes
- Auto Test Zoms in on Active Channels
- Interchangeable Fiber Optic Connectors
- Storable Parameter Settings
- Solid State Optics-No Moving Parts
- Easy Operation with Help Mode
- 6 hr Battery Life
- Impact Resistant Boot
- USB/PC Ports

**Hand Held Tunable Laser Source**

The TLS is available with 98 channels on the ITU Grid at channel Spacing down to 50 GHz (0.4nm).

**Onboard help system**

Use the onboard help text for a quick guide to the functions and features available on the FTE-6000

**TLS Display**

The TLS displays output power and wavelength, frequency or ITU channel on a bright 4” color touch display.

**Simple to Use**

Designed for simple operation and suited for field or lab use. The user has the ability to set the step size, power level, dwell time, and whether the sweep moves up or down the scale.

**Start Up**

The FTE-6100 offers a fast start up with minimal warm up and provides stable wavelength and power outputs.

**Rugged**

The FTE-6000 is manufactured in our rugged splash-proof housing with a highly protective boot.

**Fib-R-View - Integrated Video Inspection**

Ensure an accurate test and protect equipment from damage by inspecting connectors with the integrated one-touch auto-center, and one-touch auto-pass/fail fiber optic video inspection system.

**Visual Fault Locator**

The Visual Fault Locator determines the precise location of breaks or severe micro-bends in a fiber or cable under test by visually checking fiber for leaks of visible light.

**Fiber Optic Test Equipment**

**FTE-7000A SM/MM/Quad OTDR**

### Features
- Touch Screen, Keypad or Bluetooth Control
- CW & Fiber Identifier Light Source
- Up to 39dB Dynamic Range
- 1 Meter Dead Zone
- Fib-R-View Auto Pass/Fail/Centering Scope
- Auto-Wavelength Power Meter
- Bidirectional Trace Analysis with CertSoft2
- Fib-R-Map Event Analyzer
- SM, MM, Triple and Quad Units Available
- Full Auto, Construction and Expert Modes
- Live Fiber Detection
- Onboard Memory of ~1000 traces
- Dual Trace with Macro Bend Analysis
- Instant On, Immediate Scan

### Long-Life Lithium-Ion Battery

### Available in a Variety of Models
The FTE-7000A is available in a wide variety of models. Listed here are the standard Dual and Quad wave units as well as our Extended range and Economy units. Also presented in the brochure are the DWDM, CWDM and PON versions.

### Schematic View Trace Analysis
The FTE7000A displays trace analysis in schematic and table views. The trace analysis screen gives users the ability to quickly review the fiber and determine if it meets measurement criteria with its Pass/Fail capabilities.

### Auto Test
The Auto Test feature does a quick test of the fiber conditions, sets the range and pulse width, then produces a trace of the fiber under test at the selected wavelength. This is ideal to use if unfamiliar with OTDR testing or if the approximate length of the fiber is known.

### Integrated Loss Test Set
The FTE7000A has an integrated Loss Test Set. When used with compatible equipment from TTI’s 1500 series or other TTI OTDRs the auto wavelength recognition will speed testing and help eliminate user error. Not available on quad wavelength units.

### File Storage and File Transfer
Contains onboard storage for up to ~1000 traces. Trace files are easily transferred for use with the CertSoft software suite via USB/PC ports.

### CertSoft2 Software Suite
Project reporting and documentation is fast and easy with the supplied CertSoft2 reporting software. Reports can include trace graph, schematic and table analysis, loss test table and connector image.

### Project Management
Use the parameter screen to enter all parameter and threshold settings for a project, name the project and store files to the active project folder. Use stored projects to recall testing parameters for consistency in test setup.

### Specifications are subject to change without notice.

### Ordering Information
- **FTE-7000A-8513** MM 850/1300nm OTDR with LTS
- **FTE-7000A-1315** SM 1310/1550nm OTDR with LTS
- **FTE-7000A-QUAD** Quad Wavelength 850/1300/1310/1550nm OTDR with LTS
- **FTE-7000A-EXT** Extended Range SM, 1310/1550 OTDR, 36/39 dB with LTS and Video Scope Capability
- **FTE-7000A-ECON** 34/33dB, 1310/1550nm, Dual Wave Singlemode Economy OTDR (No PM or Video Scope Capability)
- **VIS-300** Video Probe

Add a “C” to the end part the number for CATV version LTS.
Fiber Optic Test Equipment

FTE-7000A-PON OTDR

Touch Screen Operation

There are three methods of operation for the FTE-7000A. There is a hard button method directly on the units keypad, the bright 4 inch display allows for touch screen operation and if a larger display is desired, this OTDR may be operated via Bluetooth on any compatible Android device.

Auto-Grade Fault Finder Mode

One button scans the fiber under test, selects best parameters at the selected wavelength and displays event analysis and schematic views of the data.

Schematic View Trace Analysis

The FTE7000A displays trace analysis in schematic and table views. The trace analysis screen gives users the ability to quickly review the fiber and determine if it meets measurement criteria with its Pass/Fail capabilities.

Auto Test

The AutoTest feature does a quick test of the fiber conditions, sets the range and pulse width, then produces a trace of the fiber under test at the selected wavelength. This is ideal to use if unfamiliar with OTDR testing or the approximate length of the fiber is not known.

Integrated Loss Test Set

The FTE7000A has an integrated Loss Test Set. When used with compatible equipment from TTI’s 1500 series or other TTI OTDRs the auto wavelength recognition will speed testing and help eliminate user error. (Not available on quad wavelength units)

File Storage and File Transfer

There is onboard storage for up to ~1000 traces. Trace files are easily transferred for use with the CertSoft software suite via USB/PC ports.

CertSoft Software Suite

Project reporting and documentation is fast and easy with the supplied CertSoft reporting software. Reports can include, trace graph, schematic and table analysis, loss test table and connector image.

Project Management

Use the parameter screen to enter all parameter and threshold settings for a project, name the project and store files to the active project folder.

Features

- 38 dB Dynamic Range
- Touch Screen, Keypad or Tablet Control
- 10 Hour Battery Life.
- CW & Fiber Identifier Light Source
- Bluetooth Android VI Operation
- Fib-R-View Auto Pass/Fail/Centering Scope
- Auto-Wavelength Power Meter
- Real-time System ORL
- Bidirectional Trace Analysis with Certsoft
- Fib-R-Map Event Analyzer
- Full Auto, Construction and Expert Modes
- Live Fiber Detection
- Onboard Memory of ~4000 traces
- CertSoft Report Software with .sor Capability
- Dual Trace with Macro Bend Analysis

Specifications are subject to change without notice.

Power Meter

Detector Type InGaAs
Connector Type 1.25 and 2.5 universal, FC, ST and SC
Measurement Range +5 to -77dBm (CATV +25 to -57dBm)
Calibrated Wavelengths 850,1300,1310,1490,1550,1625nm
Units of Measurement dBm, dB
Resolution ±0.18 dB under reference conditions, ±0.25 dB from 0 to +5 dBm and from -65 to -77 dBm
Specifications are subject to change without notice.

Light Source

Available Wavelengths 1310, 1550, 1625 nm ±20nm
Output Power 0 dBm
Laser Safety Classification Class I Safety Per FDA/CDRH and IEC-825-1 Regulation
Modulation Modes CW, 270 Hz, 1000 Hz, 2000 Hz
Specifications are subject to change without notice.

FTE-8100-CWDM/DWDM Spectrum Analyzer

**Features**

- Pass/Fail Thresholds
- Available in 8 or 18 Channels
- Fast Real Time with <1/2 second Update
- Fib-R-View Auto Pass/Fail/Centering Scope
- Bar Graph
- Auto Test Zooms in on Active Channels
- Rugged Case w/Impact Resistant Boot
- Solid State Optics-No Moving Parts
- Easy Operation with Help Mode
- 4” Color Display
- 10hr Battery Life
- Impact Resistant Boot
- Stores 1000 test
- USB/PC Port

**Fast Scan**
The FTE-8100-CWDM Channel Analyzer Displays a full scan of all 18 channels on the ITU grid twice a second.

**Onboard Help System**
Use the onboard help text for a quick guide to the functions and features available on the FTE8000-CWDM.

**Auto Test Button**
With its one button Auto Test feature, and a full set of selectable scale limits and thresholds, the FTE-8100-CWDM makes zeroing in on channel measurements easy.

**Simple to Use**
The FTE8100-CWDM is designed for simple operation and is suited for field or lab use.

**Power Tilt**
The FTE-8100-CWDM offers a Power Tilt feature for CWDM channel equalization.

**Information Display**
The channel numbers are selected in wavelength or frequency for flexibility, and the information is displayed in graph or table mode.

**Onboard File Storage**
There is file storage for up to 1000 scans that may be downloaded directly to the PC using the supplied CertSoft software suite.

**Pass/Fail Thresholds**
The unit allows users to set Pass/Fail thresholds that are displayed on the main graphical display by a highlighted background. Failed channels fall outside the highlighted area and in the table view failed channels are displayed in red.

**Integrated Video Inspection**
Ensure accurate test and protect equipment from damage, by inspecting connectors with the integrated video inspection system. Connector images may be stored, allowing users to include them with test documents.

Fiber Optic Test Equipment

FTE-7500A-CWDM-12 OTDR

Onboard Help System
Select the help icon and the OTDR displays a list of help subjects unique to the current application.

Auto Test
The Auto Test feature does a quick test of the fiber conditions, sets the range and pulse width, then produces a trace of the fiber under test. This is ideal to use if unfamiliar with OTDR testing or the approximate length of the fiber is unknown.

Construction Mode
This feature assists with testing a large number of fibers with similar settings. By pressing just one button, the OTDR will test a fiber at two wavelengths, save each test and then display both tests for review.

Trace Analysis
The trace analysis quickly gives users the ability to quickly determine if the fiber meets measurement criteria with its Pass/Fail capabilities.

Integrated Loss Test Set
The FTE7500A has an integrated Loss Test Set. When used with compatible equipment from TT's 1500 series or other TT OTDRs, the auto wavelength and auto test capabilities will speed testing and help eliminate user error.

Integrated Visual Fault Locator
Use the VFL to locate near end breaks, poor splices, and broken connectors in fiber optic cables or use it to identify fibers at the far end of a link.

File Storage and File Transfer
There is onboard storage for up to ~500 traces. Trace files are easily transferred for use with the CertSoft2 software suite via USB/PC or USB flash drive ports.

Integrated Video Inspection
Ensure accurate test and protect equipment from damage, by inspecting connectors with the integrated video inspection system. Image files may be stored, allowing users to include connector images with test documents.

Trace Analysis and Reporting
Project reporting and documentation is fast and easy with the Pass/Fail feature, onboard event table and the supplied CertSoft reporting software.

Certificated Software

Full featured trace analysis with pass/fail feature
The FTE-5200 combines four features for testing optical networks together in one unit. It brings together a -60dB ORL meter (optional), power meter, laser source and Auto Center/Pass/Fail Video Scope. (probe sold separately). The LTS may be purchased as a standard unidirectional or as a fully bidirectional loss test set.

The FTE-5200 is a full featured ORL Loss Test Set. It has 4" super bright color display with large easy to read characters. It performs optical return loss measurements to -60db at up to three wavelengths and is an automated loss test set with dual or triple wave Light sources. The power meter uses an InGaAs detector which is calibrated at 850,1300, 1310, 1490, 1550 and 1625nm, with a dynamic range to -77dBm (CATV version is available). These units are available in single, dual or triple or quad wavelength configurations and displays and test up to three wavelengths at one time. In the Autotest mode, the master unit changes wavelengths at a fixed rate and informs the slave unit of the wavelength currently being measured. Use this method to test up to three wavelengths at a time and store the loss measurements for each of the lasers fired during the test. Up to 5000 test may be stored and recalled via the unit's USB port. Use TTI's CertSoft software and manual on CD together with the Test Set. It has 4" super bright color display with large easy to read characters. The CertSoft software is compatible with all of our fiber optic test equipment. The information from OTDR, TLS, ORL and video scope may be combined to offer a comprehensive report for all of your network testing needs.

The FTE-5200 includes a video scope (probe sold separately). Use the video scope to ensure the integrity and cleanliness of the connectors being tested.

Use the modulation feature to perform fiber identification function. The power meter will identify modulated signals at 270, 1000 and 2000 Hz produced by the integrated light source.
**Loss Test Set/ ORL Meter**
The LTS/ORL Meter is available in a variety of wavelengths, with ORL. It is available in dual, triple and quad wavelength packages.

**Available Wavelengths**
The LTS may be configured with dual MM, dual SM, triple or quad wavelengths and the power meter is calibrated at 850, 1300, 1310, 1490 and 1550nm and 1625nm.

**Onboard help system**
Use the onboard help text for a quick guide to the functions and features available on the FTE-5000.

**Display**
Large 4 inch, easy to read color Touch Screen.

**Simple to Use**
It is designed for simple operation and is suited for field or lab use.

**Bluetooth Operation with Android VI App**
Operate the LTS with any compatible Android device using the free Android Virtual Instrument Application.

**Certsoft Reporting Software**
Download test results to the included CertSoft software for report generation. Results may be paired with OTDR traces and connector images for complete report generation.

**Light Source**

**Ordering Information**

- **FTE-5000-8513** LTS with 850/1300nm Light Source and Video Scope (Probe Sold Separately)
- **FTE-5000-1315** LTS with 1310/1550nm Light Source and Video Scope (Probe Sold Separately)
- **FTE-5000-345** LTS with 1310/1490/1500nm Light Source and Video Scope (Probe Sold Separately)
- **FTE-5000-QUAD** LTS with 850/1300/1310/1550nm Light Source (No Video Scope)

**Features**

- Bright Color Touch Screen
- Optical Loss/ORL Tester
- ORL Measurement Range to -60 dB
- Power Meter with -77 dBm Dynamic Range
- Video Inspection System
- Automated Loss Measurements
- Auto Test Up To Three Wavelengths
- Auto Wavelength Switching
- Universal PM and LS Adapters
- Storage for 5,000 Test
- Rechargeable Batteries
- USB Interface
- Free Report Software
- On-Board Help Feature
FTE-5100 Fiber Optic Video Scope

Features
- Interchangeable Adapters
- Digital Zoom
- USB Port for Connection to PC
- 8 Hour Battery Life
- IEC61300-3-35 Auto Pass/Fail Grading System
- 150X and 300X Representation
- Position Image for Best Viewing
- Stores Connector Images
- Use with TTI CertSoft Software Suite
- Protective Rubber Boot with Stand
- Shipped with Universal AC Adapter
- Wide Range of Adapters Available
- One Hand Operation
- 4” TFT Display
- VIS-300 Probe is Compatible with the FTE1700 and FTE7000A

The FTE5100 has a Pass/Fail grading system with images that can be stored and recalled. Stored images may be associated with OTDR trace files to produce complete professional reports that include the OTDR trace, along with connector image and LTS results. The FTE5100 is indispensable for testing connectors end face prior to connecting to expensive optical test equipment. This helps ensure accurate measurements and also helps protect equipment from damage caused by contaminated connectors. It is essential to have clean connectors to ensure networks operate at properly. The VIS-300 probe may be purchased separately and used with other FTE series equipment. The VIS-300 has a full range of tips available.

Kit Contents
The FTE-5100 Kit includes Probe, LCD Scope Unit, AC wall adapter, 2.5mm patch cord tip, USB Cable, Manual on CD and PC Software

FTE-4000 Variable Optical Attenuator

Features
- Up to 80 dB Attenuation
- Built in Output Power Monitor
- Typical Insertion Loss <2dB
- Adjustable Step Sizes
- USB PC Interface with Remote Operation
- Absolute/Relative Attenuation Settings
- Calibrated at 1310/1550
- Rugged Case with Protective Rubber Boot
- Lowest Cost Hand Held VOA
- 4” Color Display

Onboard Help System
As with all of our advanced test equipment, the VOA has an onboard help feature.

Applications
The FTE-4000 can assist in the testing of system budget compliance, balancing transmitter power and adjusting receiver attenuation settings.

Built-In Output Power Monitor
The built-in output power monitor assists in setting appropriate attenuations levels.

Sweep Mode
Sweep mode can produce attenuation levels across a selected range.

Rugged
The FTE-4000 is manufactured in our rugged splash proof housing with a highly protective boot.

Fiber Optic Test Equipment
**VFL-280 Visual Fault Locator**

**Features**
- Universal 2.5 mm Adapter
- Modulated Mode
- Standard AA Batteries
- >100 Hour Battery Life
- MM and SM Applications
- Compact Size

**TTI VFL-280 Visual Fault Locator**
This easy-to-use piece of equipment determines the precise location of breaks or severe micro-bends in a fiber or cable under test by visually checking fiber for leaks of visible light.

**Find Poor Splices**
Use the VFL to find leaky splices or connectors within a patch panel or breaks within the dead zone of an OTDR.

**Small Size**
Just a little wider and taller than a credit card, weighing just over 4 ounces.

**Battery powered**
Over 100 hours of operation on 2 AA alkaline batteries.

**Universal Adapter**
Shipped with a universal 2.5mm adapter.

**Fiber Identification**
Use the VFL to identify fibers in multi-fiber cables suitable for both singlemode and multimode fibers.

**Power Save feature**
The VFL-280 has an over rideable power saver feature that powers down the unit after 30 minutes.

Specifications are Subject to Change Without Notice.
The C-995 is a microprocessor-based control system that utilizes direct-digital-synthesis to deliver precise optical chopping rates from 4 Hz to 5000 Hz. Equipped with a large five-digit LED readout, the C-995 controller enables digital entry of the desired chopping rates from the front panel. Additionally, the C-995 is equipped with a bi-directional Rs-232 port that permits the user to set the desired chopping rate to a resolution of .001 Hz and to read the status of the instrument.

The C-995, designed with a phase-locked-loop control system, allows the chopping rate to also be synchronized to a user-supplied external clock ranging from 4 Hz to 5 KHz. The controller is then used to measure and display the frequency of the external clock.

The C-995 chopping head is attached to the controller by means of a 10 foot coiled cord. The precision etched blade is fully enclosed for protection from inadvertent damage. (An optional exposed blade version is also available.)

There are two apertures and two sections (30 slots and 3 slots) for the high and low frequency ranges, respectively. The aperture diameter is 15 mm with a slot width of 4.5 mm (30 slot section) or 30 mm (3 slot section). The small 4.75 inch square outline and two inch maximum depth permits easy integration into compact optical setups. Dual #8-32 mounting holes permit the apertures to be placed at a height as low as 0.75 inches above an optical bench, or with the included 1/2 inch rod and stand, as high as 13 inches above the mounting surface.

The ease of use and convenience of this instrument are matched only by the high performance to price ratio that is typical of products from Terahertz Technologies Inc. The C-995 is backed by our standard two year warranty and our guarantee of customer satisfaction.
The PDA-750 is a low noise, high gain, transimpedance amplifier designed to provide a direct digital readout of the current generated from a photodiode photomultiplier, or other similar current source. With full scale input ranges of ±20 nA to ±20 mA and a noise level of less than 1 pA, the PDA-750 offers superb dynamic range. Digital entry of an Amps/Watt setting via the front panel controls permits the instrument to display current measurements in units of Watts. The A/W setting ranges from 1.000 to 0.100. A variable bias supply is built into the instrument and may be switched into series with the device under test. It can supply digitally selectable voltages ranging from ±14.00 V to ±14.00 volts. The Offset control permits the nulling of background signals as large as ±200% of the range currently in use. Rechargeable batteries isolate the unit from the mains and eliminate the effects of ground loops and/or power line noise that may be present during sensitive measurements. They will power the instrument for approximately 10 hours between charges. The unit may be operated normally while the batteries are charging.

The large 4 1/2 digit Liquid Crystal Display provides a maximum resolution of 1 part in ±20,000, thus enabling the detection of very small changes in the signal under test. An analog output port provides ±2 Volt, full-scale signal that is directly proportional to the display reading of ±20,000 counts. The PDA-750 is equipped with a bi-directional Rs-232 serial port that enables the user to remotely control the instrument and read data and the instrument’s status.

Applications for the PDA-750 include: serving as a precision readout device for Unity Quantum Efficient detectors such as the QED-150 manufactured by UDT Instruments, characterization of detector dark current, a readout interface for spectrometers, spectral calibration of detectors, a high gain precision transimpedance amplifier and as a sensitive, high precision optical power meter. The ease of use and convenience of this instrument is typical of TTI products. This instrument is covered by our standard two year limited warranty and guarantee of satisfaction. The PDA750 may be purchased with a 10DP Silicon Photodiode.
The TIA-525, 527 and 952 series have BNC outputs for direct connection to your oscilloscope or digitizer. The TIA-1200, 2000, 3000, and 4000 use a type K SMA female output connector. The TIA525 offers a free space option. Patch cords and adapters can be supplied to mate with various fiber optic connectors. The TIA-525 and 527 have dual power capability, battery and external universal power supply.

(888) U.S.-OTDRS | www.teratec.us
The LTX-5510 and the LTX-5515 Signal Transports enable the precise conveyance of one analog channel plus up to four digital channels of information over fiber optic links ranging from meters to more than 10 kilometers.

Incoming analog data is digitized to 12 or 14 bit precision at up to 100 mega-samples per second and transmitted over optical fiber at one to two gigabits per second depending on the model. The receiver acquires this digital data and accurately reconstructs the analog signal at the far end of the fiber optic link.

The analog signal bandwidth is from DC to 25 MHz (-3 dB). Two input voltage ranges are provided, ±1 Volt and ±5 Volts. The input impedance of the transmitter analog channel may be set to 50 ohms or 1 megohm (75 ohms is optional).

Multiplexed along with the analog data, are up to four independent TTL/CMOS/LVTTL digital signals that may be toggled at rates of up to 48 Mb/s.

The LTX-5510 and LTX-5515 models are available in multi-mode or single-mode versions depending on the transmission distance required. The LTX-55XX-850 transmits at 850nm over multi-mode fiber optic links of up to 500 meters in length, while the LTX-55XX-1310 transmits at 1310nm over single-mode fiber to span distances exceeding 10 km.

Applications include data acquisition for plasma physics experiments, signal transmission and control of equipment at high voltage potentials, transmission of high quality video, and precise noise-free signal transmission in hostile EMI environments.

### To Order:

LTX-551X-X-X

- **Optical Transmission Rate:**
  - 0 = 1 gigabit
  - 5 = 2 gigabit

- **Laser Wavelength:**
  - 850 = 850nm MultiMode
  - 1310 = 1310nm Singlemode

- **Analog Bit Rate:**
  - Blank = 12 bit
  - 14 = 14 bit

TTI reserves the right to change specifications without notice.
## LTX-552x Digital Fiber Optic Links

### Features
- Channel capacity up to 50 Mb/S
- Accepts LV/TTL and/or CMOS/TTL inputs
- Transmits 16 independent TTL signals over a single fiber
- Outputs are LV/TTL (0 - 3.3 V)
- 850 nm version for multimode links up to 500 M
- 1310 nm version for SM links up to 10 KM
- Paired with LTX-551x to configure remote high speed 12 or 14-bit A/D and D/A converter modules

The LTX-552x conveys sixteen independent channels of digital information over a fiber optic link ranging from meters to more than 10 kilometers.

Each of the 16 incoming TTL channels is sampled at up to 5 x 10^7 times per second, multiplexed and transmitted serially over an optical fiber at up to 2 gigabit per second. The receiver acquires this digital data and de-multiplexes it to 16 separate output ports. Each of these channels may be toggled at rates ranging from 0 to 48 Mb/S.

Two models are available. The LTX5520 transmits serially at 1 gigabit and the LTX5525 transmits to 2 gigabit over either SM or MM fibers. The distance between units determines the fiber required to complete the link. 850 nm units operate on multimode fiber up to 500 meters in length, while 1310 nm units operate with single-mode fiber to span distances exceeding 10 kilometers.

The LTX-5510 precision analog fiber optic link was the first in our series of “Signal Transporters”. It digitizes an analog signal at a 50 Ms/S rate with 12-bit precision and reconstructs the signal at the LTX-5510 receiver by means of a fast D/A converter. If the user employs the LTX-5520 receiver with the LTX-5510 transmitter, the result is a remote fiber-coupled 12-bit data acquisition system.

Similarly one can employ the LTX-5520 transmitter with the LTX-5510 receiver to generate fast high resolution analog signals at a remote location.

Applications include data acquisition for plasma physics experiments, signal transmission and control of equipment at high voltage potentials, operation through equipment at high voltage potentials, operation through Faraday shields, and precise noise-free signal transmission in hostile EMI environments.

To Order: LTX-552X-X-X

- Optical Transmission Rate: 0 = 1 gigabit
- Laser Wavelength: 850 = 850nm Multimode
- Optical Connector: Blank = ST
- 1310 = 1310nm Singlemode
- FC = FC
LTX-7215 Bidirectional Analog/Digital Fiber Optic Link

### General Specifications
- **Laser Wavelength**: 1310 nm +/- 20 nm
- **Optical Transmission Rate**: 2.0 Gb/s
- **Loss Budget**: 7 dB
- **Laser Safety Classification**: Class 1 safety per FDA/CDRH and IEC-825-1 regulations
- **Typical Transmission Distances**: 10 km with 9/125µm (SM) fiber
- **Fiber Optic Connectors**: ST standard, FC available upon request
- **Analog Connector**: BNC
- **Digital Connectors**: LVTTL (0 - 3.3 V), CMOS compatible
- **LED Annunciators**: Provided (Input Overload, Optical Signal and Power)
- **Power Supplies**: Wall Mount, Universal, US, UK, Continental Europe and Australian plugs included
- **Power Requirements**: 95 - 260 VAC, 50 - 60 Hz, 16 VA Max.
- **Batteries/hrs of Operation**: 6 AA NiMH / 3 hrs
- **Operating Temperature Range**: 0 - 40 C
- **Transmitter Dimensions (mm)**: 214 L x 114 W x 59 H
- **Weight (each)**: 0.578 Kg
- **Standard Warranty**: Two Years, Components and Workmanship, 30 day Satisfaction Guarantee

### Analog Channel Specifications
- **Number of Analog Channels**: 1
- **Analog Signal Bandwidth**: DC to 25MHz (-3 dB)
- **Resolution**: 12 Bits
- **Input Voltage Ranges**: +/- 1 V or +/- 5 V
- **Transfer Accuracy**: +/- 0.1% Full Scale (100 Hz sine wave, 100 ms period)
- **Output Impedance**: 50 Ohms
- **Output Drive Capability**: +/- 5 V open circuit, +/- 2 V into 50 ohm load
- **Input Impedance**: 50 Ohms or 1 Megohm (0.1 pF, selectable)
- **A/D Sampling Rate**: 100 Mega samples/s

### Digital Channel Specifications
- **Number of Digital Channels**: 4
- **Digital Inputs**: TTL, LVTTL, CMOS compatible
- **Digital Outputs**: LVTTL (0 - 3.3 V)
- **Signal Latency (with one meter of fiber)**: Approximately 300 ns
- **Digital Channel Switching Rate**: 0 - 50 Mb/s
- **Digital Signal Edge Uncertainty**: 0 - 10 ns

### Features
- Single Fiber Transceivers
- DC-25MHz Analog
- Four Independent Digital Channels
- 0 to 50 Mb/s Per Digital Channel
- +/-5V or +/-1V Full Scale I/O
- Digital LVTTL, CMOS/TTL Input
- Analog I/O - 12 bit Precision
- AC/DC Operation

Transmit and receive precise analog data from DC to 25 Mhz over a single optical fiber!

The LTX-7215 Bidirectional Fiber Optic Link multiplexes one analog signal along with up to 4 independent TTL/CMOS/LVTTL digital channels to over 10 kilometers with a single fiber. The incoming analog data is digitized to 12 bit precision at 100 mega samples per second and the digital channels operate at data rates of 0 to 50Mb/s. This is then transmitted at 2 Gb/s for distances up to 10 kilometers.

The digital signal is then received and the analog signal is accurately reproduced at the far end of the fiber optic link. The analog signal bandwidth may be from DC to 25 MHz (-3db). The LTX-7215 has input voltage ranges of ±1 Volt or ±5 Volts. The input impedance of the analog channel may be set to 50 ohms or 1 meghm (75 ohms is optional). The LTX7215 series has a battery option that will allow for up to 3 hours of operation for experiments at extremely high potentials.

Applications include data acquisition for plasma physics experiments, signal transmission and control of equipment at high voltage potentials, transmission of high quality video, and precise noise-free signal transmission in hostile EMI environments.

### Ordering Information
- **LTX-7215-1310**: Singlemode, 2.0 Gbps Analog/Digital Signal Transporter
- **LTX-7215-1310-BAT**: Singlemode, 2.0 Gbps Analog/Digital Signal Transporter with Battery Pack

We welcome the challenge of CUSTOM APPLICATIONS

TERATEC Technologies Inc.
The LTX-7225 Bidirectional Fiber Optic Link multiplexes up to 16 independent channels of digital TTL/CMOS/ LVTTL information to over 10 kilometers with a Singlemode fiber. The LTX-722X samples each of the channels at 100 million times a second, The signals are then multiplexed and transmitted serially over a single optical fiber at 2 gigabits per second. The far end of the fiber link demultiplexes the signal back into independent outputs. Each of these channels maybe be toggled at rates up to 50 Mb/S.

Using the LTX-721X in conjunction with a LTX-722X unit, results in a remote fiber-coupled 12-bit data acquisition system, digitizing the signal at up to 50 Mb/s and reconstructs the signal by means of a fast D/A converter. The units may also be employed in the reverse direction if desired.

Applications include data acquisition for plasma physics experiments, signal transmission and control of equipment at high voltage potentials, operations through Faraday shields, and precise noise -free signal transmission in hostile EMI environments.
LT-880 Laser Tachometer

Features
- Remote Sensing of RPM and Angular Vibration
- No Special Reflective Tape Required
- Large 5 Digit LED Display
- Sensing rates to 40 000 PPS
- Ni-MH Powered with Fast Charger
- Measures RPM, RPS, PPS
- Entry of number of encoder sectors

The LT-880 Laser Tachometer is a hand-held, battery operated device that senses the passage of reflective/non-reflective markings on a rotating or linearly translated piece of machinery in order to determine the target’s rotational rate or its linear velocity. The sensing head is remote from the electronics package and is fiber coupled. This permits measurement of objects in hostile environments or in hard-to-get-to locations. The sensed change in reflectivity from black to white generates a transition at its output.

This TTL/CMOS compatible signal may be utilized by a spectrum analyzer, computer or electronic counter in order to provide information concerning vibration, angular or linear velocity of the machinery under test. The high speed of the unit, 40,000 PPS, coupled with its small spot size can provide high resolution measurements unattainable with conventional incandescent source tachometers.

Use the right angled adapter if it is not possible to aim the standard optical head at the target. The transmissive head is a beam breaking device that allows a <1/4 inch slotted target to pass through the heads transmitter and receiver.

A six digit LCD display indicates the rate of passage of the white/dark areas of the encoder and registers the results in units of revolutions per minute, (RPM), revolutions per second, (RPS), or pulses per second (PPS). The reading is updated twice per second. The user may input the number of pulses per revolution generated by the encoder for use in the subsequent calculations. They may range from 1 pulse per revolution to 255 pulses per revolution.

Specifications

- Units of Measurement
  - Revolutions per Second, Revolutions per Minute, Pulses per Second
- Measurement Update Rate
  - Twice per Second
- Readout Uncertainty
  - ± .02 % of Reading, ± 1 LSD
- Maximum Measurement Rate
  - 40 000 PPS
- Range from Sensor to Target
  - 12 to 125 mm (using white copier paper)
- Laser Wavelength
  - 650 nm ± 10 nm
- Laser Output Power
  - < 2 milliwatts
- Laser Spot Size
  - < 1.9 mm @ 13 mm range
- Laser Beam Divergence
  - < 13 milliradians
- Display
  - Six Digit LCD, 0.375 height, Six LED annunciators
- Frequency Output Port
  - TTL pulse for each reflective sector sensed, (0 to 5 volts)
- Output Impedance
  - 100 Ohms
- Standard Fiber Optic Cable Length
  - 5 meters
- Standard Fiber Types
  - Receiver - 400 um core, Transmitter - 62.5 um core
- Standard Connector Type
  - ST Type
- Batteries Supplied
  - Four AA NiMh, 2700 mAH
- Charger Power Requirements
  - 95 - 260 VAC, 50-60 Hz Universal, < 10 VA
- Mains Connectors Supplied
  - North American, Great Britain, Continental Europe, Australian
- Charging Time
  - Approximately two hours
- Dimensions (Controller)
  - 200 mm L x 98 mm W x 38 mm D
- Dimensions (Sensor)
  - 40 mm L x 13 mm Diameter, 1/2 by 20 Thread, Jam Nuts Included
- Operating Temperature, Electronics, Sensor Head
  - 0 - 50 C, - 40 - 120 C
- Weight
  - 0.46 Kg
- Accessories Provided
  - Carrying Case, Batteries, Power Supply/Charger, Operating Manual
- Standard Warranty
  - Two years, Components and Workmanship, 30 Day Satisfaction Guarantee

Ordering Information

- LT-880
  - Fiber Optic Laser Tachometer (Includes 5 Meter Cable with Reflective Sensor Head)
- LT-880-10
  - Fiber Optic Laser Tachometer (Includes 10 Meter Cable with Reflective Sensor Head)
- LT-880-T
  - Fiber Optic Laser Tachometer (Includes 5 Meter Cable with Transmissive Sensor Head)
- LT880OH-RF
  - 5 Meter Cable w/Reflective Sensor Head for use with LT 880
- LT880OH-T
  - 5 Meter Cable w/Transmissive Sensor Head for use with LT 880
- RAA-LT880
  - Right Angle Adapter for use with LT-880 Reflective Optical Head

TTI Technologies Inc.

**Amazing Power in a Micro Package**
TTI supports a full line of multi-wave test equipment for DWDM and CWDM networks. Our products include advanced OTDRs as well as the new Micro-OSAs. Our products meet the requirements for the small, rugged, and powerful test equipment today’s field technicians require.

### DTORs
- FTE-7100-CWDM-ID OTDR
- FTE-8200-CWDM OTDR
- FTE-7100 MICROOTDR
- FTE-7000A DWDM OTDR
- FTE-7000A MM/SM/Quad OTDR
- FTE-7000A-PON OTDR
- FTE-7000A-CWDM OTDR
- FTE-7500A-CWDM-ID OTDR

### DWDM Analyzers
- FTE-8200-DWDM Micro OSA
- FTE-7000A-DWDM OTDR
- FTE-8100-CWDM/DWDM Spectrum Analyzer

### CWDM Analyzers
- FTE-7100-CWDM-ID OTDR
- FTE-8200-CWDM Channel Analyzer
- FTE-7000A-CWDM OTDR
- FTE-8100-CWDM/DWDM Spectrum Analyzer
- FTE-7500A-CWDM-ID OTDR

### Fiber Optic Links
- LTX-551x Analog/Digital Fiber Optic Links
- LTX-552x Digital Fiber Optic Links
- LTX-7215 Bidirectional Analog/Digital Fiber Optic Link
- LTX-7225 Bidirectional Fiber Optic Link

### O to E Converters Comparison Chart
- C-995 Optical Chopper
- PDA-750 Photodiode Transimpedance Amplifier
- LT-880 Laser Tachometer

### TLS/LTS/Scopes/VFL
- FTE-8100 Mini Optical Spectrum Analyzer
- FTE-6100 Tunable Laser Source
- FTE-5200 Advanced Loss Test Set
- FTE-5000 Loss Test Set/ORL Meter
- FTE-5100 Fiber Optic Video Scope
- FTE-4000 Variable Optical Attenuator
- VFL-280 Visual Fault Locator

Advanced fiber optic test and measurement equipment in the palm of your hand.

- Multi-wave (multi-channel) DWDM network testing in conveniently small, powerful packages
- Video Inspection systems on board to ensure proper connector conditions prior to testing
- DWDM OTDR features a fully functional Tunable Laser Source operation
- Micro-OSAs include a 6GHz line graph feature
